Professional Summary

React-focused Frontend Developer and BCA student with hands-on experience building and deploying real-world MERN stack applications. Skilled in creating responsive, component-based interfaces using React and modern JavaScript. Currently expanding expertise in backend development with Node.js and Express. Recognized in national-level tech programs and hackathons including Scaler YIIC 4.0 and Hackshastra.

Education

Bachelor of Computer Applications (BCA)
IMS Ghaziabad
2025 – Present

Technical Skills

- React.js, HTML5, CSS3, JavaScript (ES6+)
- Node.js, Express.js (Learning)
- MongoDB (Basics)
- Git, GitHub, Vercel, VS Code
- REST APIs, Component-based Architecture, Responsive Web Design

Projects

Smart Medi Connect – Healthcare Platform (React Frontend)

Live: <https://smartmediconnect.vercel.app/>

- Developed a modern healthcare web platform frontend using React with reusable and modular components.
- Implemented responsive UI for seamless cross-device experience.
- Structured project following scalable MERN architecture.
- Optimized routing and UI for performance and maintainability.
- Deployed on Vercel with fast global delivery.
- Backend (Node.js, Express, MongoDB) under development.

TeamFit AI — Real-Time Collaborative Coding & AI Analysis Platform

Hackathon Project | React, Flask, PostgreSQL, JWT, Groq AI

- Built a real-time collaborative coding platform with session-based workflows using secure invite codes.
- Implemented keystroke-level contribution tracking to measure individual participation dynamically.
- Developed an AI-powered analysis system generating performance insights from live coding activity.
- Designed a professor dashboard for transparent evaluation of team collaboration.
- Engineered a dual-database architecture (SQLite + PostgreSQL fallback) for production readiness.
- Integrated JWT authentication and secure API handling across the full stack.
- Deployed using Vercel (frontend) and Render (backend).

Achievements

- Selected among Top 85 participants in Scaler YIIC 4.0 Internship Program.
- Hackshastra 24-Hour Hackathon Finalist — Built TeamFit AI (AI-powered collaborative coding

platform).

- Actively building production-level MERN stack projects.

Career Objective

Seeking a React / Frontend Developer Internship where I can contribute to real-world products, improve my full stack development skills, and collaborate with experienced engineering teams.
